

KIT smartINTEGRATOR

Data exchange made easy with Clarity PPM

MORE STABLE

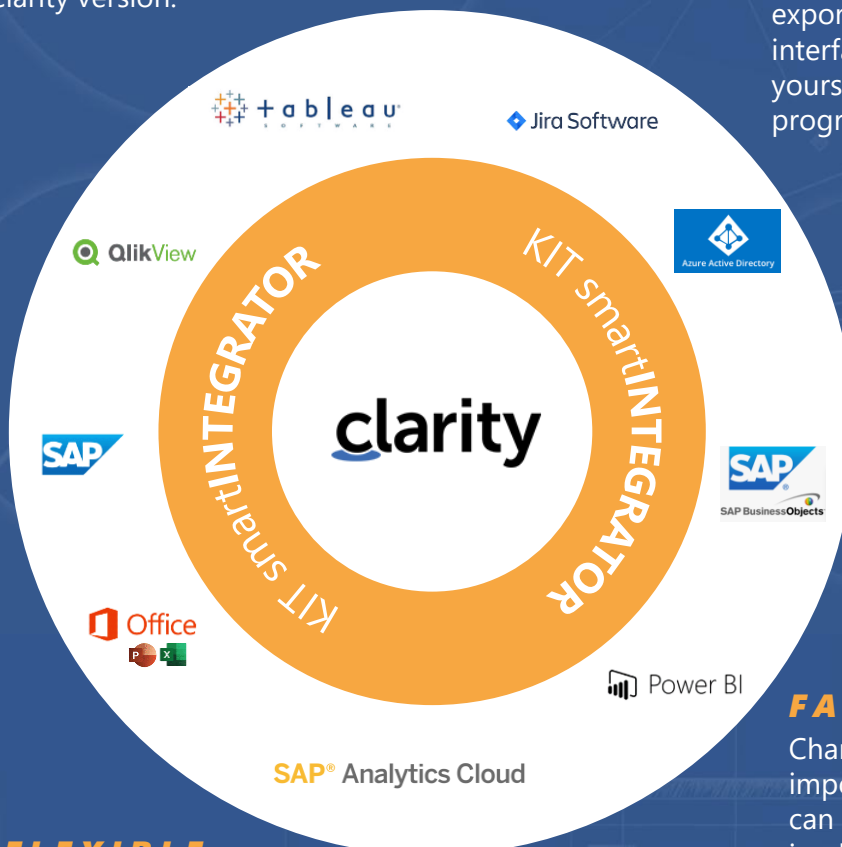

We supply the appropriate KIT Integrator version for each Clarity version. Thoroughly tested, it is guaranteed that your integrations will work reliably even if you update to the latest Clarity version.

SAFER

Information from the entire Clarity data model and the data warehouse can be made available via REST services and secured with specific access rights.

INDEPENDENT

Create transformations, exports and entire interfaces completely by yourself and without Java programming.

MORE FLEXIBLE

Adapting interfaces, e.g. to add additional fields or changing the transformation logic, can be done in just a few steps and without complex Java programming.

FASTER

Changes to exports, imports and interfaces can be tested and implemented without restarting Clarity services. Maintenance windows for downtimes are no longer necessary.

Live in action!
