

KIT smartASSIST

Simplify your work with Clarity PPM

SMARTER

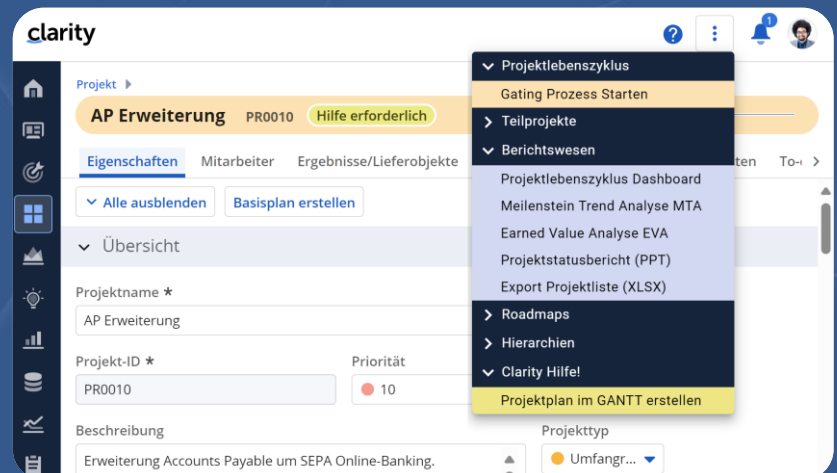

smart**ASSIST** dynamically offers you the possible menu items - and nothing more - depending on your status and access rights. This keeps your menu simple and you can be sure that you always carry out actions at the right time and in the right context.

MORE EFFICIENT

No more unnecessary clicks! Navigate directly from a main project to a subproject and back. Jump from the project idea to the resulting project. Or call up all available dashboards and reports in the project properties with one click!

EASIER

Whether you want to run workflows, access dashboards or get information from a help page, with smart**ASSIST** you can be sure that you will find all the options centrally in one place in a menu.

MORE INTUITIVE

Quickly find all possible actions in one place – whether it's a button, submenu or icon. smart**ASSIST** provides you with a central menu with all the options.

COMPREHENSIVE

Use smart**ASSIST** to integrate external content such as Power BI dashboards from the Microsoft Power BI Online service.

Live in action!

Would you like to see KIT's smart**ASSIST** menu in action?

You can find many examples in short videos on our YouTube channel:
