

KIT BENEFITS

Working smart with Clarity PPM

With KIT (Configuration and Integration Tool), we offer a tool for the faster and more efficient introduction and optimization of Clarity PPM.

With little effort and to the greater satisfaction of users and IT.

KIT is easy to install and use - even retrospectively.

It consists of 3 modules: smart**ASSIST**, smart**INTEGRATOR** and smart**REPORTING**.

Smooth use

Interfaces to SAP, Azure, Jira, Power BI, MS Office and others can be used stably across all Clarity versions.

Solve precisely

KIT offers you everything you need for integration into the IT landscape - a smart add-on for Clarity PPM. The perfect middle ground between an expensive API management solution and a time-consuming in-house development.

Save budget

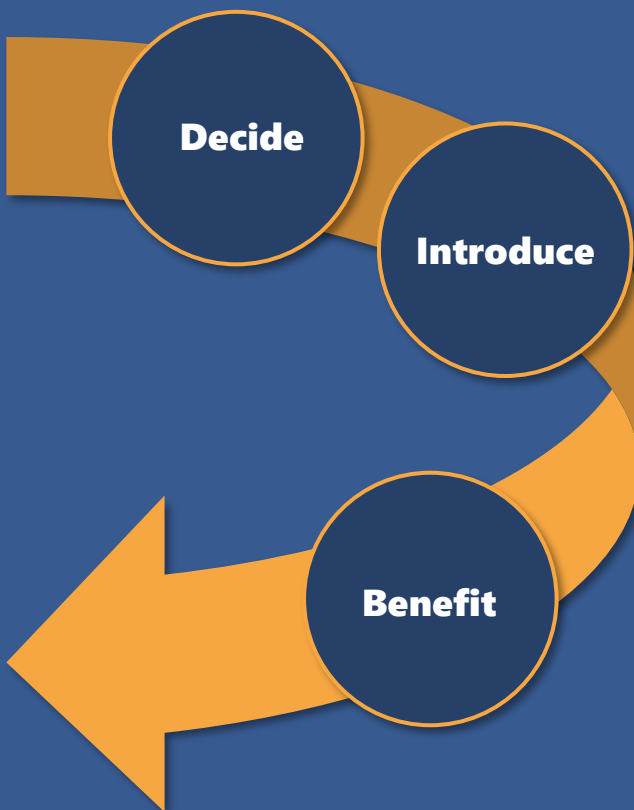

You can quickly make the desired adjustments to the KIT menu and the configured interfaces without in-depth programming knowledge. This allows you to implement or change your requirements within a very short time.

Save time

With KIT, all user groups benefit from enormous time savings. End users reach their goal with just a few clicks. Power users, on the other hand, can configure independently instead of programming.

Stay independent

Power users can adapt all desired changes independently in KIT if required. Remain independent and implement any extension without external support.

KIT smartASSIST

Easier working with Clarity PPM

INTELLIGENT

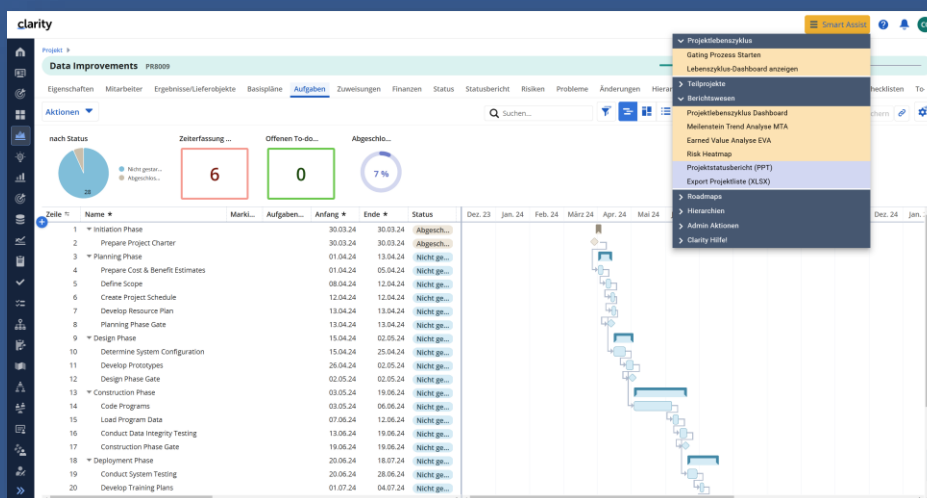

smart**ASSIST** offers you the possible menu items dynamically and depending on the status and your access rights - and no more. This keeps your menu clear and you can be sure that you always carry out actions at the right time and in the right context.

COMPREHENSIVE

Integrate external content such as Power BI dashboards from the Microsoft Power BI Online service with smart**ASSIST**.

EFFICIENT

No more unnecessary clicks! Navigate directly from a main project to a sub-project and back. Jump from the project idea to the resulting project. Or call up all available dashboards and reports in the project properties with a single click!

SIMPLER

No matter whether you want to execute workflows, call up dashboards or find information on a help page. With smart**ASSIST**, you can be sure that you will find all options centrally in one place in one menu.

INTUITIVE

Quickly find all possible actions in one place - whether button, submenu or icon. smart**ASSIST** provides you with a central menu with all options.

KIT smartINTEGRATOR

Data exchange with Clarity made easy

STABLE

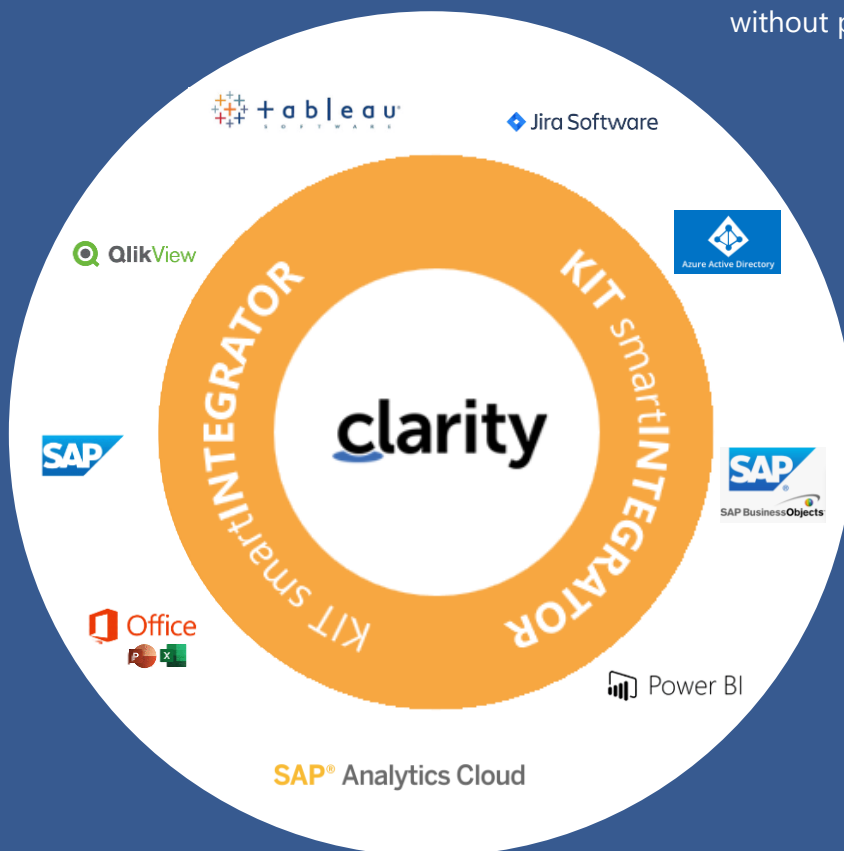

We supply the right KIT Integrator version for every Clarity version. Thoroughly tested, we ensure that your integrations work reliably even when you change versions.

SAFE

Information from the entire Clarity data model and the data warehouse can be made available via REST services and assigned specific access rights.

INDEPENDENT

Create transformations, exports and entire interfaces yourself and without programming.

FLEXIBLE

The adaptation of interfaces, e.g. by adding further fields or changing the transformation logic, can be done in a few simple steps and by your own employees.

FAST

Exports, imports and interfaces can be changed, tested and imported without having to restart services and request downtimes.

Efficient reporting

Offer your users professional-looking and perfectly formatted reports in various formats (PDF, Excel, PPT).

An extensive set of display options with tables, simple and complex charts etc. ensures that any information can be presented in a way that is appropriate for the target group.

Perfect integration

Integrate created reports into Clarity PPM exactly where your users need them.

smartREPORTING provides an intelligent menu including parameter input.

Your benefits

- Protect your investments and keep all Jaspersoft reports.
- Save a lot of money - compared to other reporting solutions!
- Seamless integration with Clarity PPM for the creation and use of reports with perfect design and layout.
- All licenses for Jaspersoft are included.

Jaspersoft Studio

Create powerful and professional-looking reports with extensive logic and perfect design.

Jaspersoft Studio provides a graphical user interface that leaves nothing to be desired.

Test KIT now for free and without obligation!

- 3 months free evaluation
- Support for installation & configuration
- Use without limitations
